

SGEU Up-in-Range

The following posting is in accordance with the clauses dealing with "In-Hiring Rate of Pay".

Permanent Full-time

INF005327 - Senior Programmer Analyst

Ministry: Executive Government>013 Saskbuilds and Procurement

Grade and Job: SGEU.11., SPR - SGEU

Salary Range: \$44.534 - \$53.882

Rate Approved: \$48.00 per hour

Key Responsibilities of position:

Responsible for technical support/enhancements for all custom applications that reside within the Government of Saskatchewan. Examples of duties at this level include: - Provides coaching, training, and guidance to programmer analysts. This includes resolving problems and issues escalated from the programmer analysts. - Responsible for providing technical support and developing solutions for assigned corporate systems using technologies such as Oracle Database, Oracle E-Business Suite (EBS), Java, shell scripting on Linux/Unix, Git, and DevOps practices. Duties include developing technical specifications and program procedures based on design documents, coding and assembling solutions to automate processes and meet business requirements, and collaborating with internal teams or external consultants as needed. Ensures proper documentation of design decisions, estimating assumptions, code modules, and performance metrics in accordance with ITD process standards or as assigned. - Provides advanced analysis by using various techniques such as facilitation methods and modeling tools to capture and model requirements used for business and process driven enhancements and/or to complete new functionality. Executes ongoing maintenance tasks and performs evaluations and tuning of business applications. - Supports various applications, including taking responsibility for monitoring the system, and communicating with the vendors regarding problems to ensure the system is functioning in order to meet business needs. Diagnoses, isolates, and debugs issue(s) and performs problem resolution. Ensures proper documentation of the problem resolution. - Examines and analyzes the feasibility of potential solutions related to IT initiatives and assists in the preparation of business cases for consideration by management. Analyzes complex business and operational system requirements and processes and has the ability to prepare specifications and programs of a highly complex or technical nature. - Provides technical advice and support to users, clients, and team members. Delivers client focused services for the benefit of clients and employees through the application of computer and application specific technologies. Provides innovations in information management, data collection, analysis, and integrated processes, leveraging industry Best Practices in application development, support and maintenance. - Shares responsibility for quality of applications under development and for applications currently in production. Develops application standards that other programmers must follow (e.g., application development and documentation standards); and reviews requirements of other team member's projects for consistency, accuracy and security. This involves actively participating as a member of a review or inspection team, in order to achieve quality standards and goals as well as provide status updates and discuss any issues that may arise.

Qualifications of person Appointed:

- 18 years of directly related experience.
- Software Systems Engineering (BASc).
